

Fast, Simple, and Secure Content Migration to Dropbox for Business

Tervela provides Dropbox for Business customers with a simple, fast, secure, automated solution for transferring and syncing content into Dropbox for Business. Tervela's Cloud FastPath solution is the first fully automated cloud service for fast and secure premises-to-Dropbox and cloud-to-Dropbox content migration, sync, and backup.

Simple Migrations:

Cloud FastPath is a simple point-and-click web service that automates file migrations by streaming data to the cloud and between cloud environments, securely and efficiently. No coding, no consulting, and no software to maintain. Connect data sources to between Dropbox and on-premises file servers or other cloud providers in minutes and the solution does the rest. Cloud FastPath's automation and syncing is ideal for reducing the impact migrations can have on business operations while concurrently enabling a centrally managed and executed migration.

Fast & Efficient Migrations:

Cloud FastPath is specifically designed to move GBs, TBs, and even PBs of data over the Internet. Other migration methods are NOT able to overcome WAN limitations, nor effectively address unique file naming and cloud platform incompatibilities. Cloud FastPath is proven to deliver significant Dropbox for Business migration efficiencies because it has built-in and automated performance features like: file compression at the data source, WAN optimization, automated file translation features, error handling protocols, optimized data extraction and loading, and optional features such as User/Permission/Metadata mapping. Additionally, Cloud FastPath provides syncing capabilities to ensure migration integrity and change data capture.

Secure Migrations:

Cloud FastPath is architected for the security sensitive user. NO customer data touches the Cloud FastPath service & NO data gets staged/cached – data moves directly between the data source(s) and Dropbox. All data in motion is encrypted using 256-bit SSL encryption. Administrators receive detailed reports that prove what was transferred.

Bulk Migration & Secure High Performance Data Transfer

- Simple, Fast, Secure, and automated migrations to and from Dropbox for Business.
- Cloud-to-cloud & on-premises-to-cloud.
- On-boarding service for new customers
- Example: Network File Shares to Dropbox for Business or Box to Dropbox

Sync External File Systems with Dropbox

- Sync Dropbox with external file systems
- Periodic / batch sync for backups and syncing
- Use one system as a ready to use backup/mirror of the primary system
- Support many systems in many locations
- Replicate user & permission mapping as well as folder structure
